SPECIFICATIONS

FM tuner section

Tuning range	87.5 MHz — 108 MHz
Antenna terminals	75 ohms, unbalanced
Intermediate frequency	10.7 MHz
Sensitivity (at 40 kHz deviation)	at 46 dB quieting 17.3 dBf, 2 μ V (mono) 37.9 dBf, 22.5 μ V (stereo)
Usable sensitivity	10.3 dBf, 0.9 μ F (IHF) 1.6 μ V (S/N = 26 dB)
Signal-to-noise ratio	83 dB (mono) 79 dB (stereo)
Harmonic distortion at 1 kHz	Mono: 0.009% (DISTANT OFF), 0.015% (DISTANT ON) Stereo: 0.025% (DISTANT OFF), 0.04% (DISTANT ON)
IM distortion	Mono: 0.009% (DISTANT OFF), 0.015% (DISTANT ON) Stereo: 0.025% (DISTANT OFF), 0.04% (DISTANT ON)
Separation at 1 kHz	58 dB (DISTANT OFF), 50 dB (DISTANT ON)
Frequency response	40 Hz — 12.5 kHz \pm 0.2 dB 30 Hz — 15 kHz $\begin{matrix} +0.2 \\ -0.5 \end{matrix}$ dB

Selectivity	at 300 kHz 45 dB (DISTANT OFF), 60 dB (DISTANT ON) at 400 kHz 75 dB (DISTANT OFF), 85 dB (DISTANT ON)
Capture ratio	1.0 dB
AM suppression ratio	65 dB
Image rejection ratio	80 dB
IF response ratio	90 dB
Spurious response ratio	100 dB
RF intermodulation	74 dB (IHF)
Muting threshold	Approx. 30 dBf, 18 μ V
Output level/impedance at 75 kHz deviation	750 mV, 1.7 kilohms

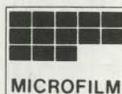

—Continued on page 2—

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY SHADING AND MARK  ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

FM STEREO/FM-AM TUNER

SONY®

AM (MW/LW) tuner section

		MW	LW
Tuning range		531 - 1602 kHz (9 kHz step) 530 - 1610 kHz (10 kHz step)	153 - 344 kHz
Antenna		layout-free AM antenna external antenna terminal	
Intermediate frequency		450 kHz	
Usable sensitivity	layout-free AM antenna	300 μ V/m (at 999 or 1,000 kHz)	700 μ V/m (at 230 kHz)
	external antenna	30 μ V (at 999 or 1,000 kHz)	200 μ V (at 230 kHz)
Signal-to-noise ratio		54 dB (50 mV/m)	
Harmonic distortion		0.3% (at 50 mV/m, 400 Hz)	
Selectivity		55 dB (9 kHz) 60 dB (10 kHz)	55 dB (9 kHz)

General

System	PLL quartz-locked digital synthesizer system FM stereo, FM/AM super-heterodyne tuner
Power requirements	220 V ac (or 240 V ac adjustable by authorized Sony personnel), 50/60 Hz
Power consumption	15 watts
Dimensions	Approx. 430 × 80 × 340 mm (w/h/d) (17 ¹ / ₈ × 3 ¹ / ₄ × 13 ¹ / ₂ inches) including projecting parts and controls
Weight	4.1 kg (9 lb 1 oz)

FEATURES**WAVE OPTIMIZER TECHNOLOGY**

The WOIS (Wave Optimized IF System) which makes the IF waveform optimum shape in stereo and monaural mode and the WODD (Wave Optimized Direct Detector) which forms the VCO oscillation waveform of the PLL detector ensure low distortion sound.

DIRECT COMPARATOR TECHNOLOGY

An employed PLL IC allows the comparison frequency to be as high as the 100 kHz channel spacing frequency, thus eliminating the tendency of a low comparison frequency to slip into the audio range and degrade the signal-to-noise ratio.

PROGRAM FUNCTION

Using the program function, you can automatically tune in to up to four stations which have been memorized in any sequence you want. Stations will be received one by one as the power is turned on and off by an optional audio timer.

EFFORTLESS TUNING

Quick and accurate station selection is possible with an electronic digital readout on the band/frequency-display.

Four methods of tuning are available:

Manual tuning, in which each band can be scanned either rapidly or step-by-step.

Automatic tuning (FM only), in which the band is scanned automatically until a signal is received.

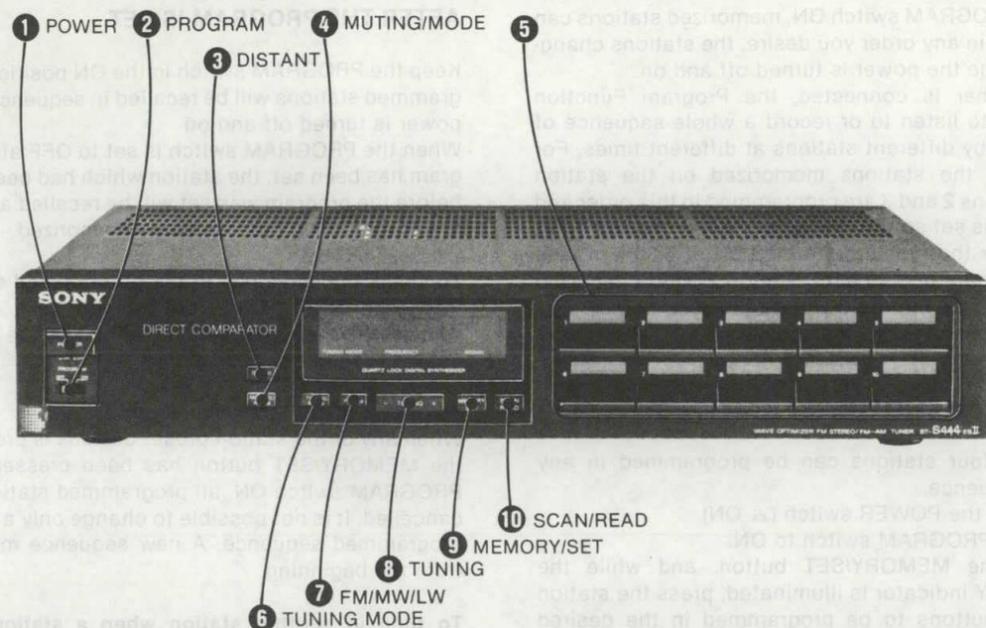

Sweep tuning (FM only), in which the entire band is scanned. In this mode, when a signal is received, scanning stops for a few seconds to allow you to monitor the received station, then the scanning resumes.

Memory preset tuning, in which the frequency of up to 10 stations can be stored in the memory. In this mode, you can tune in your favorite station by pushing its station button.

The settings of the MUTING/MODE button and DISTANT button can also be memorized for each station.

The SCAN/READ button allows you to scan the preset stations only.

FUNCTION OF CONTROLS

Each number in the text is keyed to that of the photo and illustration on above.

1 POWER switch

Depress to turn on the power. To turn the power off, press the switch again.

2 PROGRAM switch

To use the program function, set this switch to ON. For ordinary use, be sure to keep the switch in the OFF position.

3 DISTANT button

Used to select the FM usable selectivity. When an interference occurs due to nearby station, press this button so that the DISTANT indicator lights. In the AM mode, this button is used to change the frequency response of the received sound. When the high-frequency sound is noticeable, press this button so that the DISTANT indicator lights.

4 MUTING/MODE button

This button serves a dual purpose: it is a muting switch and FM mode selector. To tune in a strong FM station, press the button so that the MUTING indicator lights up. In this mode, the muting circuit will be activated to eliminate interstation noise while tuning and the FM station will be received in stereo mode.

When you want to tune in a very weak FM station, press the button again so that the MUTING indicator goes off. The muting circuit will be deactivated and the FM station is received in monaural mode. In this mode, keep the amplifier volume down to avoid speaker damage caused by interstation noise during tuning.

5 Station preset buttons and station identification windows

To call up a memorized station, press the appropriate button. Station labels (supplied) can be placed in these windows.

6 TUNING MODE button

Selects a tuning system—MANUAL, AUTO or SWEEP. The selected tuning system will be indicated in the display window.

7 Band selector

Selects the desired band. The selected band will be indicated in the band/frequency-display window.

8 TUNING button

Press the left side [-] to go to a lower frequency and the right side [+] to go to a higher.

During automatic tuning: Press to start automatic frequency scanning. The frequencies below or above that shown on the display window will be scanned automatically until a signal is received. To resume scanning, press the button again.

During sweep tuning: Press to scan the entire band. When a signal is received, the scanning will stop for a few seconds while the SWEEP indicator flashes, then resume scanning automatically until the next signal is received. This operation will be repeated until you press the MEMORY/SET button.

During manual tuning: Keep pressed to change the frequency continuously until the desired frequency is received. The frequency figures will change rapidly. Successively press and immediately release the button to change the frequency slowly.

9 MEMORY/SET button

This button has a dual purpose. With the PROGRAM switch set to OFF, it works as a MEMORY button and with the PROGRAM switch set to ON, as a program SET button.

MEMORY button: Press to memorize the tuned station to a station preset button. The MEMORY indicator will appear in the frequency display window for a few seconds indicating that the preset memory circuit is standing by.

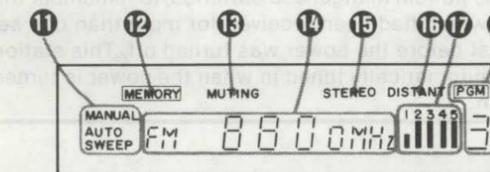

SET button: Press to program the preset stations in the desired order. The MEMORY indicator will appear indicating that the program circuit is standing by.

10 SCAN/READ button

This button has a dual purpose. With the PROGRAM switch set to OFF, it works as a memory SCAN button and with the PROGRAM switch set to ON, as a program READ button.

SCAN button: Press to automatically scan the stations memorized on the station preset buttons.

READ button: By pushing this button, the programmed station order can be checked.

**Display window****11 Tuning mode indicators**

The tuning system selected by the TUNING MODE button is displayed.

12 MEMORY indicator

When the MEMORY/SET button is pressed, the MEMORY indicator will appear for a few seconds indicating that the memory circuit is standing by.

13 MUTING indicator

This indicator illuminates when the MUTING/MODE button is pressed in FM reception.

14 Band/frequency-display

Permits reading the received frequency at a glance from the figures.

15 STEREO indicator

This indicator will light when an FM stereo program of sufficient signal strength is tuned in with the MUTING/MODE button pressed.

16 DISTANT indicator

When the DISTANT button is pressed, this indicator lights to indicate that the distant function is activated.

17 Signal indicator

Indicates the strength of the tuned signal by the amount of indicator illumination.

18 PGM (program) indicator

With the PROGRAM switch set to ON, the PGM indicator lights and the order in the programmed sequence of the station being received is displayed here.

MANUAL TUNING

- Depress the POWER switch (ON).
- Set the PROGRAM switch to OFF.
- Select the desired band with the band selector.
- For FM reception, press the MUTING/MODE button so that the MUTING indicator illuminates. To tune in a very weak station, see below.
- Press the TUNING MODE button so that the MANUAL indicator appears.
- Tune in the desired station with the TUNING button, observing the STEREO indicator (in FM reception), the signal indicator and the band/frequency-display.
- Adjust the volume and tone of the amplifier.

When the frequency figures reach the end of the tuning range of each band, the frequency will then be scanned from the opposite end of the tuning range.

To tune in a weak or noisy station

When FM stereo signals are noisy, or to tune in a very weak FM station, lower the volume and disengage the MUTING/MODE button by pressing it again. The MUTING indicator will go out. This will result in better reception, at the sacrifice of the stereo effect.

To prevent interference due to nearby stations in FM mode

Press the DISTANT button so that the DISTANT indicator lights. The selectivity is improved, resulting in better reception.

AUTOMATIC TUNING (FM only)

- 1 Depress the POWER switch (⏻ ON).
- 2 Set the PROGRAM switch to OFF.
- 3 Select the desired band with the band selector.
- 4 For FM reception, press the MUTING/MODE button so that the MUTING indicator appears.
- 5 Press the TUNING MODE button so that the AUTO indicator appears.
- 6 Press the TUNING button. Automatic frequency scanning will stop when a signal is received. If the signal received is not the desired one, press the TUNING button again.
- 7 Adjust the volume and tone of the amplifier.

SWEEP TUNING (FM only)

- 1 Depress the POWER switch (⏻ ON).
- 2 Set the PROGRAM switch to OFF.
- 3 Select the desired band with the band selector.
- 4 For FM reception, press the MUTING/MODE button so that the MUTING indicator appears.
- 5 Press the TUNING MODE button so that the SWEEP indicator appears.
- 6 Press the TUNING button. When a signal is received, scanning will stop and the SWEEP indicator flashes, so the received station can be heard for a few seconds, after which scanning resumes. To stop sweep tuning, press the MEMORY/SET button.
- 7 Adjust the volume and tone of the amplifier.

During automatic tuning or sweep tuning, if the signal strength is weak, the band/frequency-display figures will not stop at the desired frequency. When this happens, adjust the antenna for optimum reception. If the signal strength is still too weak for automatic tuning, tune in the station as described in "MANUAL TUNING".

MEMORY PRESET TUNING

Once the frequencies of the stations you want to tune in are memorized, all you have to do is push a button.

For each station preset button, you can memorize an FM, an AM (MW or an LW) station in any desired sequence. A total of 10 stations can be memorized.

TO MEMORIZE STATION FREQUENCIES

- 1 Tune in the desired station following the procedure described in "MANUAL TUNING", "AUTOMATIC TUNING" or "SWEEP TUNING". Set the MUTING/MODE button and DISTANT button according to the reception condition. The settings of these buttons are also memorized.
- 2 Press the MEMORY/SET button, and while the MEMORY indicator is illuminated, press the desired station preset button.

The MEMORY indicator will go out. Then the frequency is memorized.

Repeat these steps for each station preset button.

Press each preset button to check a memorized frequency.

Notes

- Even when the setting of the MUTING/MODE button or DISTANT button is changed, the original settings of these buttons are maintained in the memory.
- The MEMORY indicator will go off automatically after a few seconds. When the indicator is out, the memory circuit does not operate to memorize the station.
- The previous memory will be erased when a new frequency is committed to the memory of the same button. An erasure cannot be made without a new input.

TO RECEIVE A MEMORIZED STATION

Turn the POWER switch on, and simply press the desired station preset button.

Memory of the last received station

This tuner includes a memory circuit, which is backed up by the lithium manganese batteries, to remember the station which had been received for more than one second just before the power was turned off. This station will be automatically tuned in when the power is turned on again.

MEMORY SCANNING

With the PROGRAM switch set to OFF, the SCAN/READ button allows you to quickly hear what kind of programs are being broadcast by the preset station.

When you press the SCAN/READ button, the memorized stations are automatically received in order for a few seconds each. Pushing a particular station preset button stops the scanning. The scanning sequence will be shown by the flickering of the lamp in the station identification window above the station preset button.

PROGRAM FUNCTION

With the PROGRAM switch ON, memorized stations can be received in any order you desire, the stations changing each time the power is turned off and on.

When a timer is connected, the Program Function allows you to listen to or record a whole sequence of broadcasts by different stations at different times. For example, if the stations memorized on the station preset buttons 2 and 3 are programmed in this order and if the timer is set so that the power will be turned on at 8:00 a.m. for the first time, turned off at 8:30 a.m. and turned on again at 9:00 a.m., Station 2 will be received at 8:00 a.m. and Station 3 will be received at 9:00 a.m. automatically.

TO PROGRAM THE PRESET STATIONS

A total of four stations can be programmed in any desired sequence.

- 1 Depress the POWER switch (⏻ ON).
- 2 Set the PROGRAM switch to ON.
- 3 Press the MEMORY/SET button, and while the MEMORY indicator is illuminated, press the station preset buttons to be programmed in the desired order. The PGM indicator will show the programmed station.

Notes

- When the MEMORY indicator is out, the program circuit does not operate. (The MEMORY indicator will go off automatically after a few seconds.) If the MEMORY indicator goes out before you finish setting all of the stations to be programmed, press the MEMORY/SET button again to illuminate the MEMORY indicator and press the station preset buttons from the beginning of the sequence.
- Two different stations cannot be received with the Program Function if the power is not turned on and off to change the station. If you want to make a timer-activated recording of one station from 7:30 to 8:00 a.m. and continue recording another station from 8:00 a.m., for example, you should set the timer so that the power will be interrupted at 7:59 and turned on again at 8:00.
- To insure that the data is properly stored in the program circuit, every time the PROGRAM switch is turned ON and every time stations are programmed, wait for a few seconds before turning the PROGRAM switch OFF.
- If you wish to program only two or three stations, press these station preset buttons while the MEMORY indicator is illuminated, then press the MEMORY/SET button again or wait until the indicator goes off.

AFTER THE PROGRAM IS SET

Keep the PROGRAM switch in the ON position. The programmed stations will be recalled in sequence when the power is turned off and on.

When the PROGRAM switch is set to OFF after the program has been set, the station which had been received before the program was set will be recalled again, while the programmed order remains memorized.

To check the sequence of the programmed stations

Push the SCAN/READ button with the PROGRAM switch ON. The programmed stations will be received in order for a few seconds each.

To cancel the programmed stations

When any of the station preset buttons is pressed after the MEMORY/SET button has been pressed with the PROGRAM switch ON, all programmed stations will be cancelled. It is not possible to change only a part of the programmed sequence. A new sequence must be set from the beginning.

To tune in another station when a station is being received with the program function

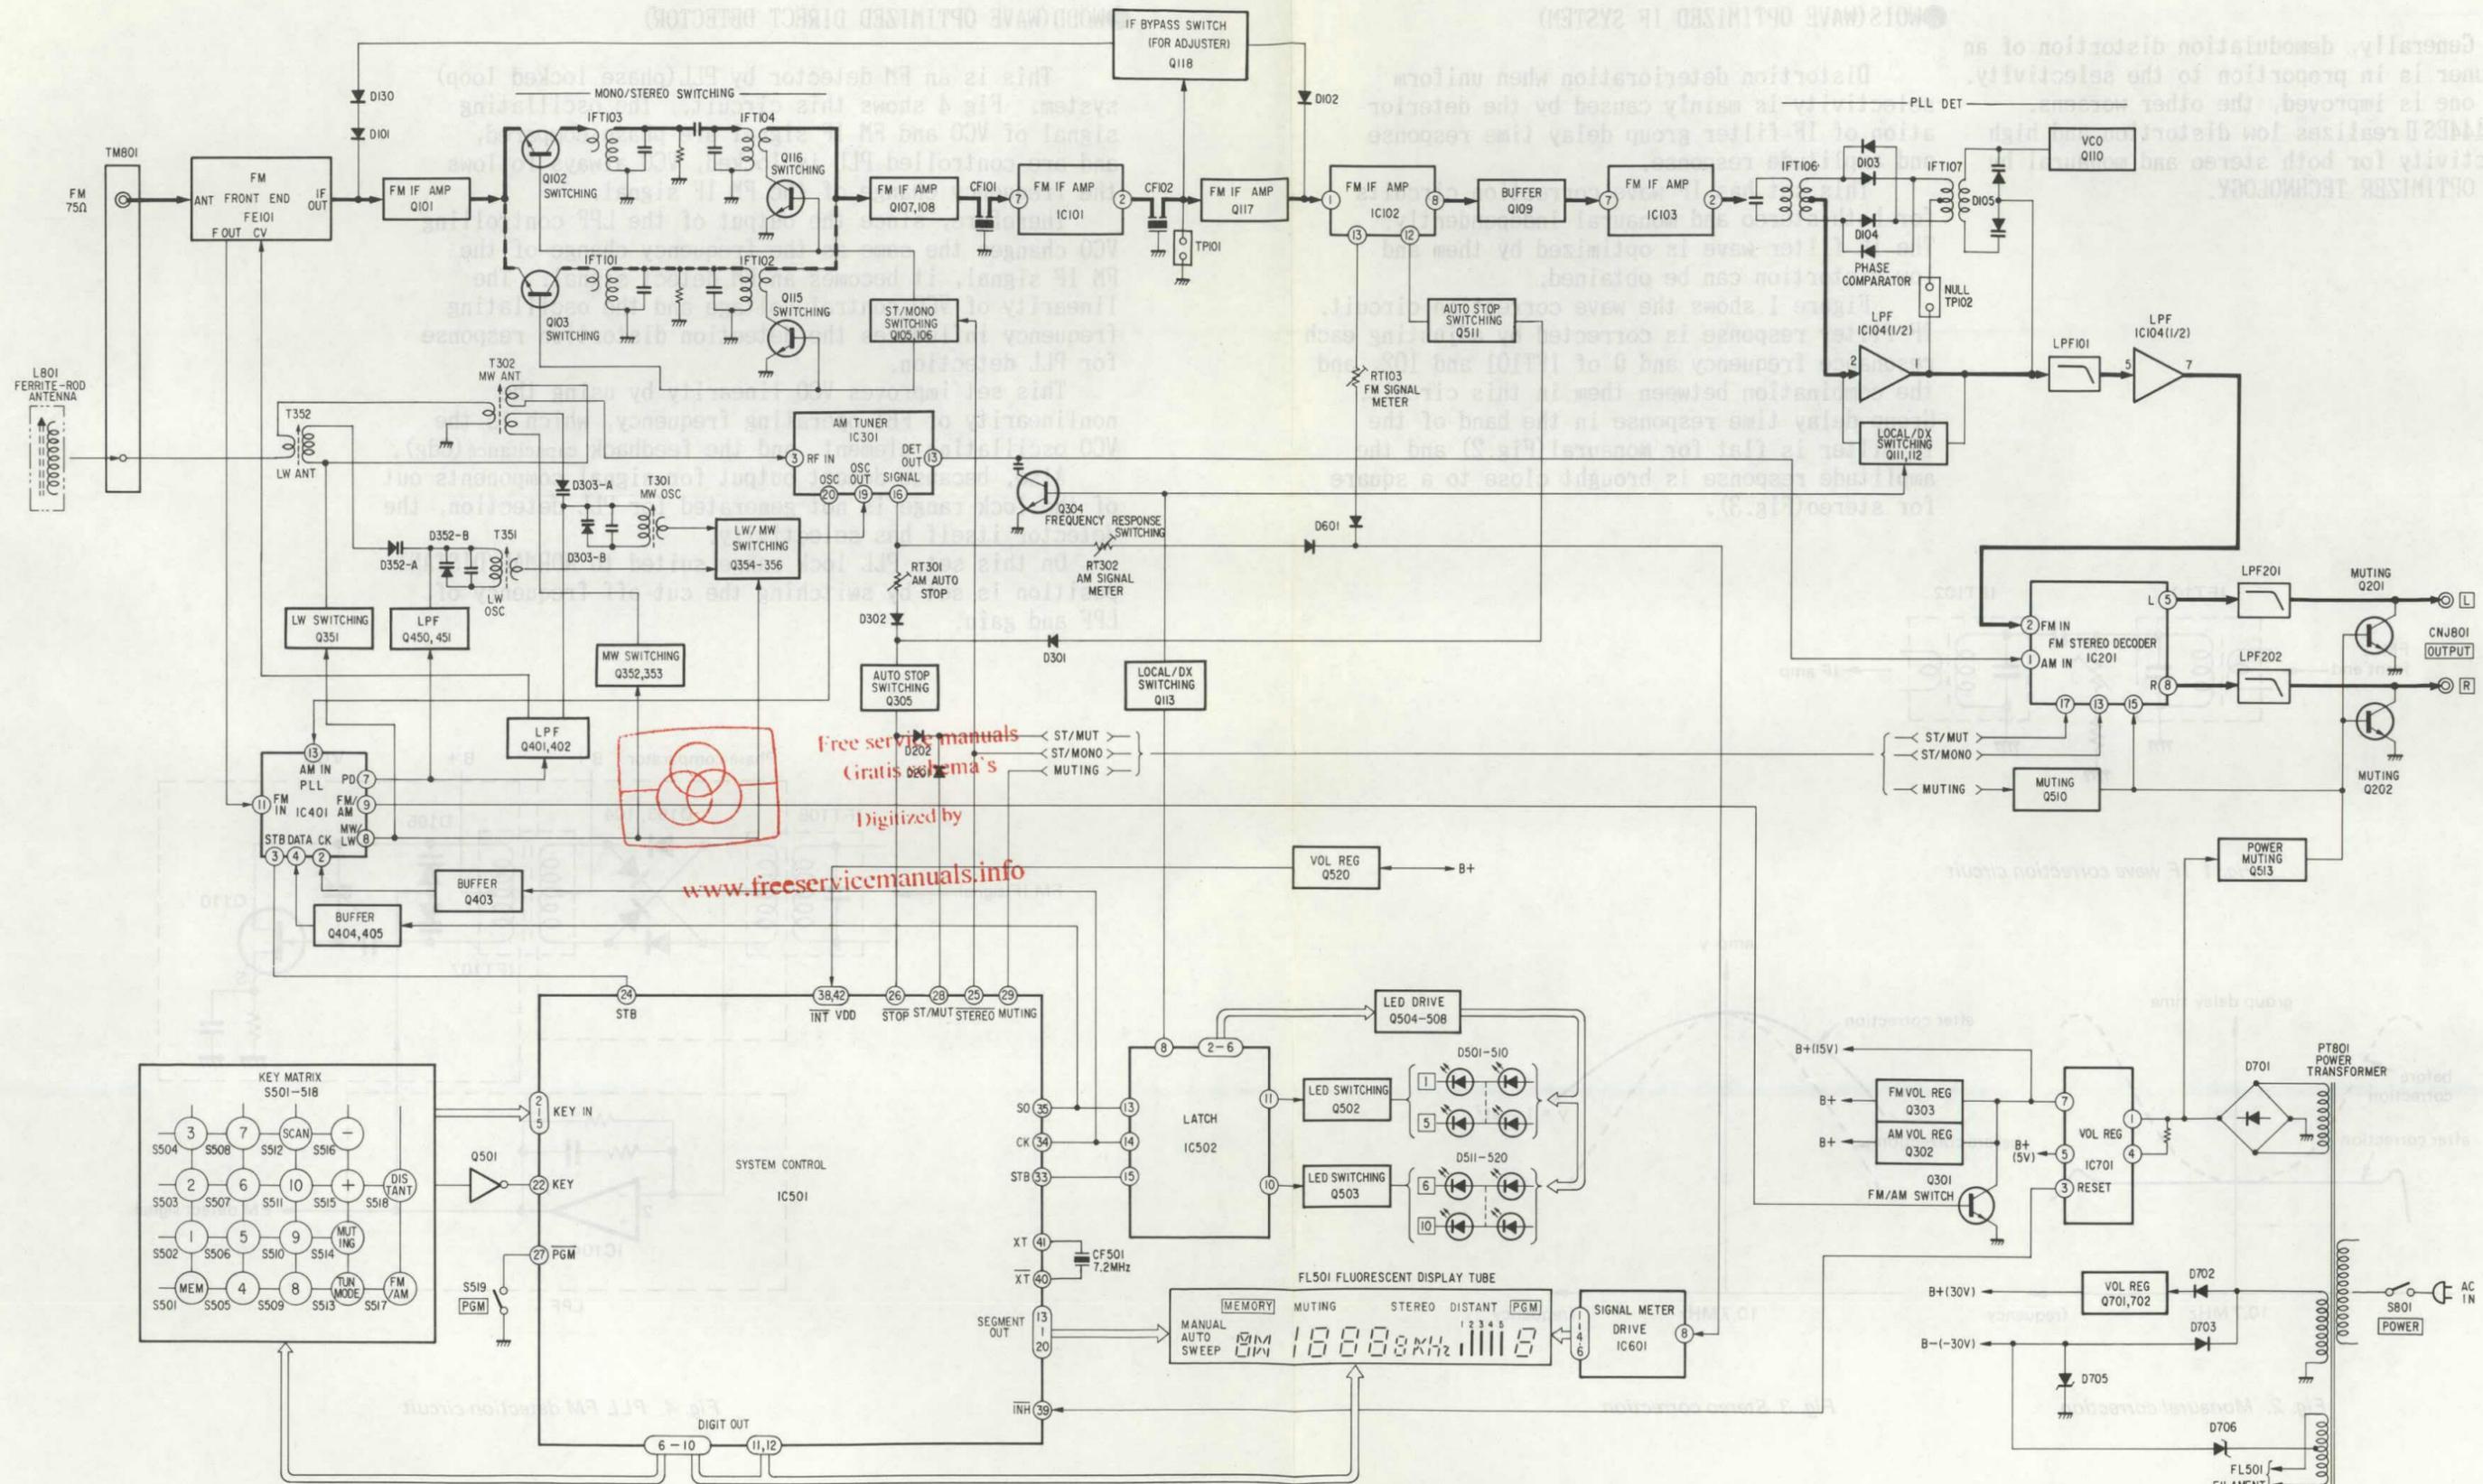

The station preset buttons and the TUNING button are locked when the PROGRAM switch is ON so that the station cannot be accidentally detuned. To change the station, first set the PROGRAM switch to OFF and then tune in the desired station with a station preset button or the TUNING button.

SECTION 3 CIRCUIT DESCRIPTION

【 WAVE OPTIMIZER TECHNOLOGY】

Generally, demodulation distortion of an FM tuner is in proportion to the selectivity. When one is improved, the other worsens. ST-S444ES II realizes low distortion and high selectivity for both stereo and monaural by WAVE OPTIMIZER TECHNOLOGY.

●WOIS(WAVE OPTIMIZED IF SYSTEM)

Distortion deterioration when uniform selectivity is mainly caused by the deterioration of IF filter group delay time response and amplitude response.

This set has IF wave correction circuits for both stereo and monaural independently. The IF filter wave is optimized by them and low distortion can be obtained.

Figure 1 shows the wave correction circuit. IF filter response is corrected by adjusting each resonance frequency and Q of IFT101 and 102, and the combination between them in this circuit. Group delay time response in the band of the IF filter is flat for monaural(Fig.2) and the amplitude response is brought close to a square for stereo(Fig.3).

●WODD(WAVE OPTIMIZED DIRECT DETECTOR)

This is an FM detector by PLL(phase locked loop) system. Fig 4 shows this circuit. The oscillating signal of VCO and FM IF signal are phase-compared, and are controlled PLL is locked, VCO always follows the frequency change of the FM IF signal.

Therefore, since the output of the LPF controlling VCO changes the same as the frequency change of the FM IF signal, it becomes an FM detect signal. The linearity of VCO control voltage and the oscillating frequency influences the detection distortion response for PLL detection.

This set improves VCO linearity by using the nonlinearity of FET operating frequency, which is the VCO oscillating element, and the feedback capacitance(Cdg).

Also, because detect output for signal components out of the lock range is not generated for PLL detection, the detector itself has selectivity.

On this set, PLL lock range suited to NORMAL/DISTANT position is set by switching the cut-off frequency of LPF and gain.

[IC501 (SYSTEM CONTROL IC) PIN FUNCTIONS]

IC501 (TC9303N-006) is a system control IC.

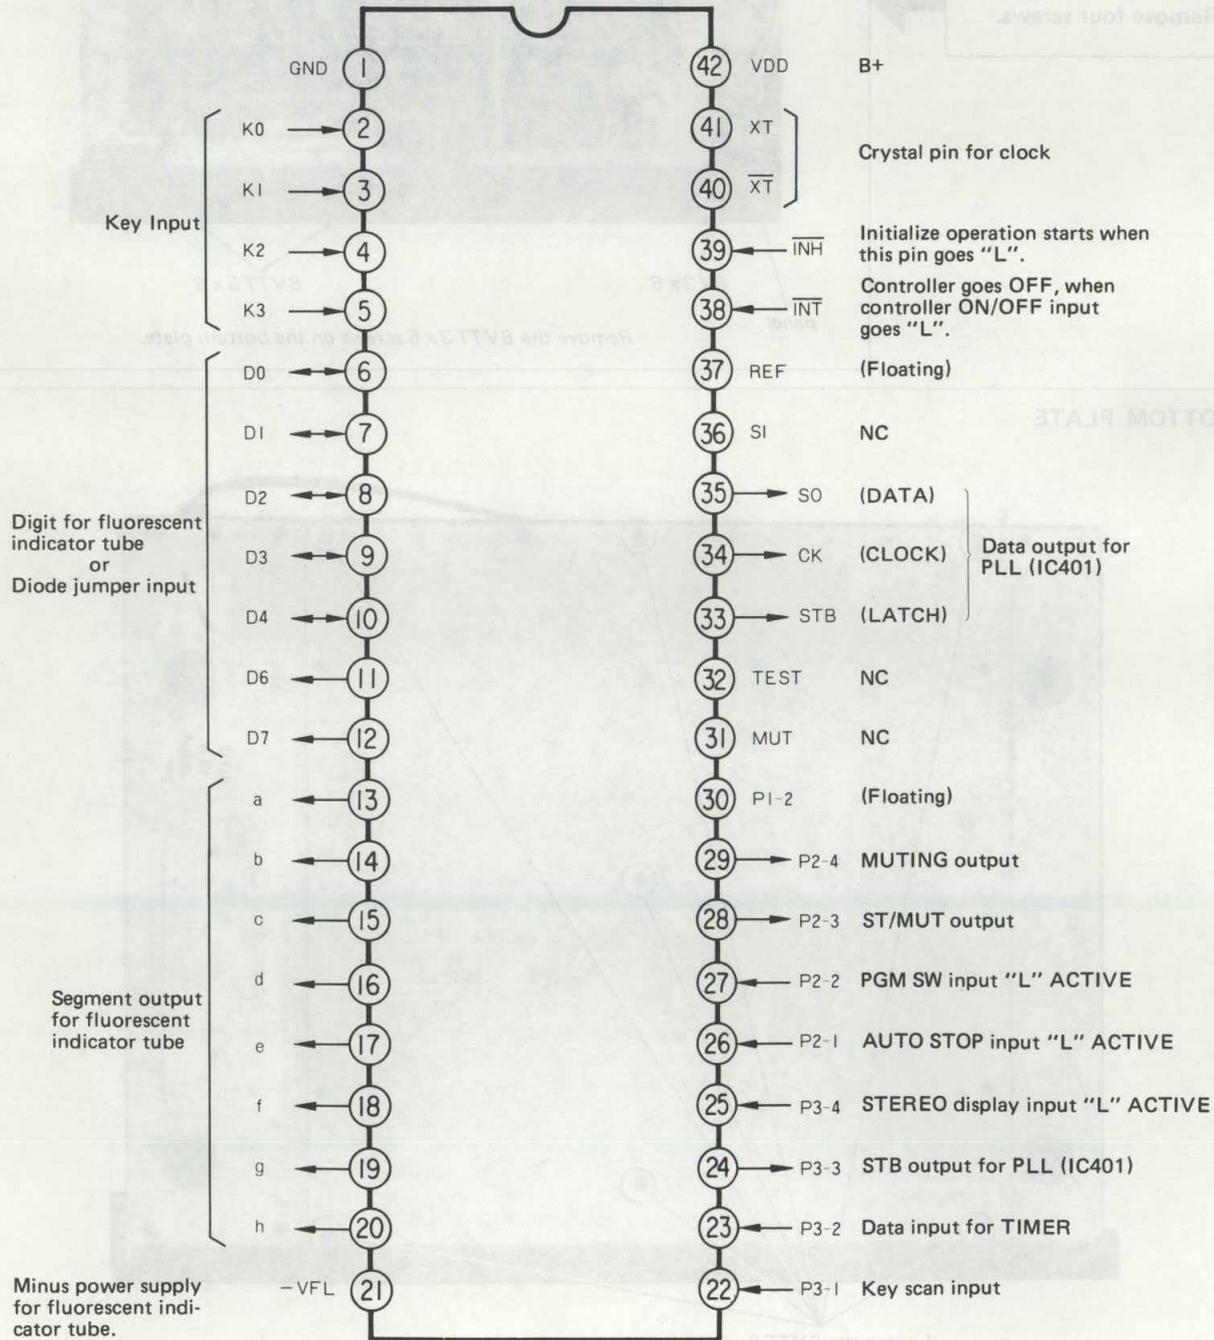

- Main Functions:
- Key input detection.
 - Data generation for PLL Synthesizer (IC401).
 - Fluorescent indicator tube (FL501) drive
 - Preset, program memory

SECTION 2 DISASSEMBLY

PANEL

CASE
• Remove four screws.

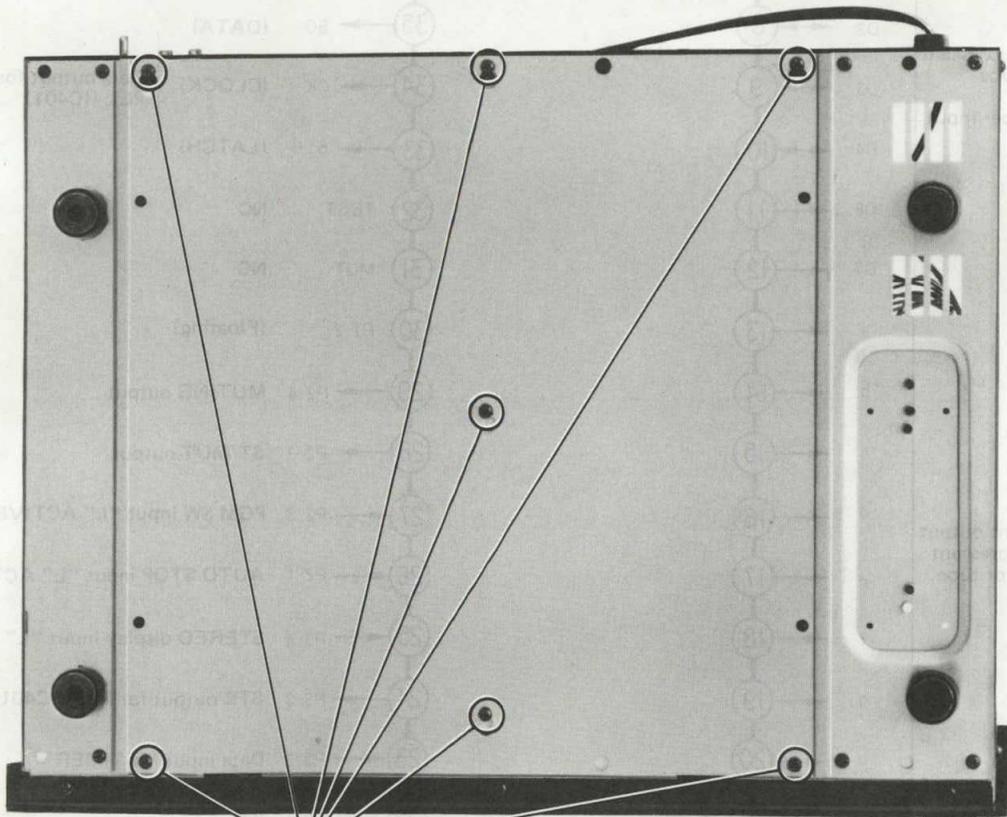

BV 3 x 6
panel

BVTT 3 x 6

Remove the BVTT 3 x 6 screws on the bottom plate.

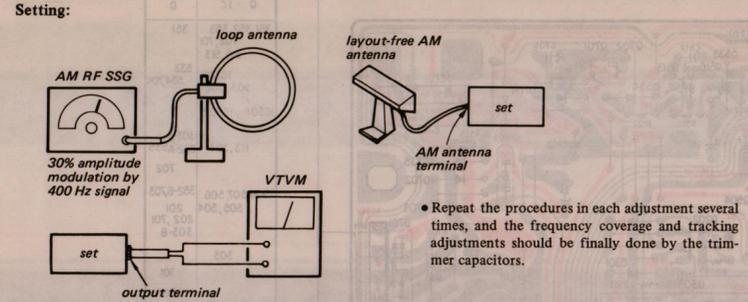

BOTTOM PLATE

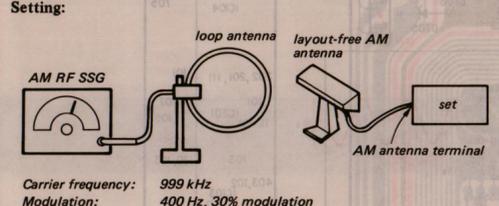

Loosen the BVTT 3 x 6 screws.

SECTION 3 ADJUSTMENTS

AM SECTION

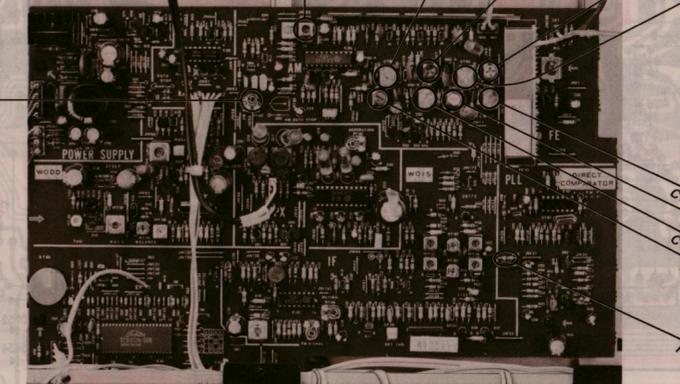

AM Meter Level Adjustment

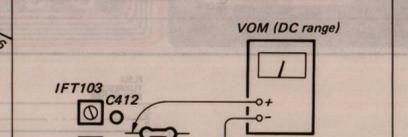

- Procedure:**
1. Set AM RF signal generator so that the AM antenna input level becomes 94 dB (μV/m).
 2. Turn RT302 until the scale 5 on signal indicator lights up.

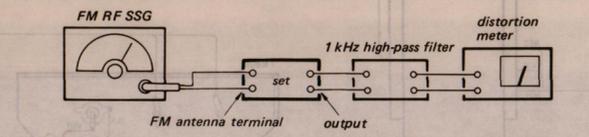

AM IF ADJUSTMENT		MW TRACKING ADJUSTMENT		LW TRACKING ADJUSTMENT	
Adjust for a maximum reading on VTVM.					
450 kHz	IFT301	1,404 kHz	603 kHz	170 kHz	310 kHz
		CT301	T302	T352	CT351

AM FREQUENCY COVERAGE ADJUSTMENT			
	Adjustment Location	Frequency	VOM reading
LW	CT352	344 kHz	18.5 V ± 0.1 V
	T351	153 kHz	2.2 V ± 0.1 V
MW	CT302	1,602 kHz	22 V ± 0.1 V
	T301	531 kHz	1.8 V ± 0.1 V

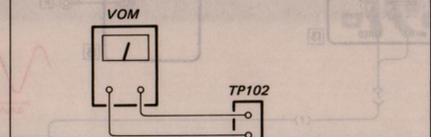

FM SECTION

FM STEREO STANDARD SIGNAL	FM MONAURAL STANDARD SIGNAL
Carrier frequency: 98 MHz Modulation: Audio 1 kHz, 16.25 kHz deviation (40.6%) Sub-channel 38 kHz, 16.25 kHz deviation (40.6%) Pilot 19 kHz, 7.5 kHz deviation (10%)	Carrier frequency: 98 MHz Modulation: 1 kHz, 40 kHz deviation (100%)

Phased Lock Loop Detect Adjustment

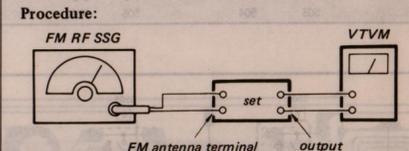

Receiving frequency: 98 MHz
DISTANT switch: OFF
MUTING/MODE switch: OFF

1. Short-circuit TP101 to the ground.
2. Put off the SSG (monaural modulation) output and adjust RT105 for 0 V reading on VOM (TP102).
3. Set the SSG output to 80 dB (μV).
4. Adjust IFT107 for 0 V reading on VOM (TP102).
5. Adjust CT101 for the minimum distortion ratio.
6. Repeat the step 4 and 5 several times.
7. Remove the short-circuit of TP101.

Muting Width Adjustment

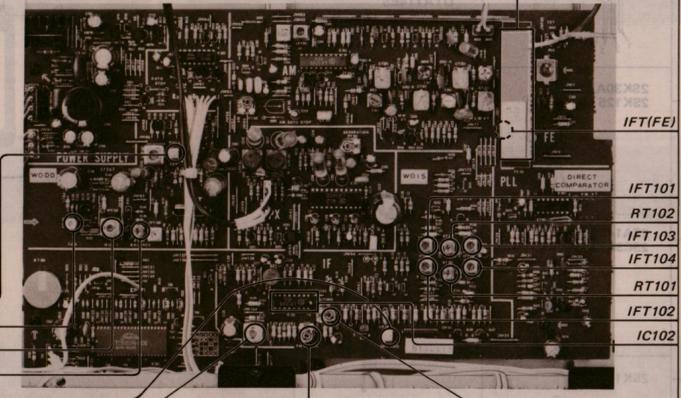

Setting:
DISTANT switch: OFF
MUTING/MODE switch: ON
Receiving frequency: 98 MHz

- Procedure:**
1. Increase the frequency of FM RF SSG 50 kHz more than that of the receiving frequency and adjust IFT105 to obtain output.
 2. Decrease the frequency of FM RF SSG 50 kHz less than the receiving frequency and make sure to obtain output.
 3. Repeat step 1 and 2, then adjust IFT105 to obtain output when increasing or decreasing the frequency of FM RF SSG by the same amount.

Servicing Precaution

The front-end section has been carefully adjusted at the factory. When it is worn out, be sure to exchange it all with new section, because it is difficult to repair.

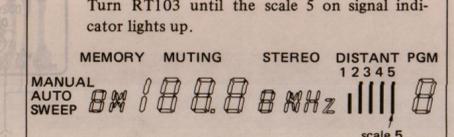

FM Meter Level Adjustment

Setting:
DISTANT switch: OFF

Procedure:

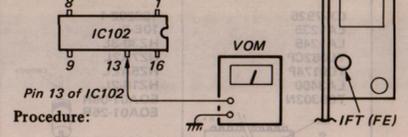

Carrier frequency: 98 MHz
Modulation: No modulation
Output level: 560 μV (55 dB)

Turn RT103 until the scale 5 on signal indicator lights up.

IF Distortion Adjustment

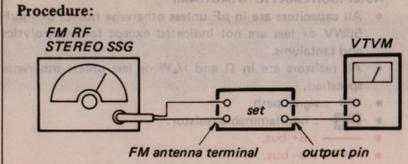

Setting:
Receiving Frequency: 98.0 MHz
DISTANT switch: OFF
MUTING/MODE switch: OFF

- Procedure:**
1. Turn RT101 and 102 fully clockwise.
 2. Set the SSG (monaural) output to the weak input (about 20 dB (μV)) and put off the MUTING/MODE switch. Then adjust IFT102 for the maximum reading on VOM.
 3. Adjust IFT (FE) for the maximum reading on VOM.
 4. Set the SSG output to 80 dB (μV).
 5. Adjust IFT101 and RT101 alternately for the minimum distortion.
 6. Set the SSG output to the weak input (about 20 dB (μV)) and put on the MUTING/MODE switch. Then adjust IFT104 for the maximum reading on VOM.
 7. Set the SSG output to 80 dB (μV) at stereo modulation mode.
 8. Adjust IFT103, RT102 alternately for the minimum distortion.

FM Stereo Separation Adjustment

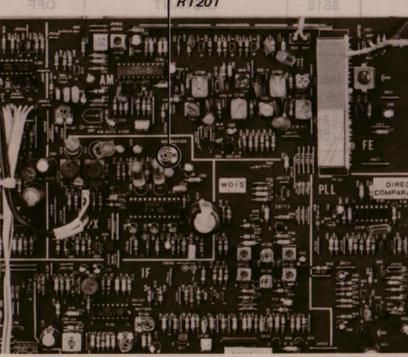

Setting:
DISTANT switch: OFF
MUTING/MODE switch: ON

Carrier frequency: 83 MHz
Output level: 1 mV (60 dB)
Modulation: Audio 1 kHz,
16.25 kHz deviation (40.6%)
Sub-channel 38 kHz,
16.25 kHz deviation (40.6%)
Pilot 19 kHz, 7.5 kHz deviation (10%)

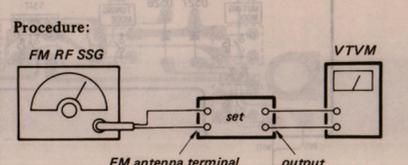

FM stereo signal generator output channel	VTVM connection	VTVM reading (dB)
L-CH	L-CH	(A)
R-CH	L-CH	(B) Adjust RT201 for minimum reading.
R-CH	R-CH	(C)
L-CH	R-CH	(D) Adjust RT201 for minimum reading.

L-CH Stereo separation: (A) - (B)
R-CH Stereo separation: (C) - (D)
The separations of both channels should be equal.

FM Muting Level Adjustment

Setting:
DISTANT switch: OFF
MUTING/MODE switch: ON

- Procedure:**
1. Tune the set to 83 MHz by pushing the TUNING (+, -) button.
 2. Adjust RT104 for instantaneous 0 V reading on VTVM.

SECTION 4

SECTION 5
EXPLODED VIEWS AND PARTS LIST

NOTE:
The mechanical parts with no reference number in the exploded views are not supplied.

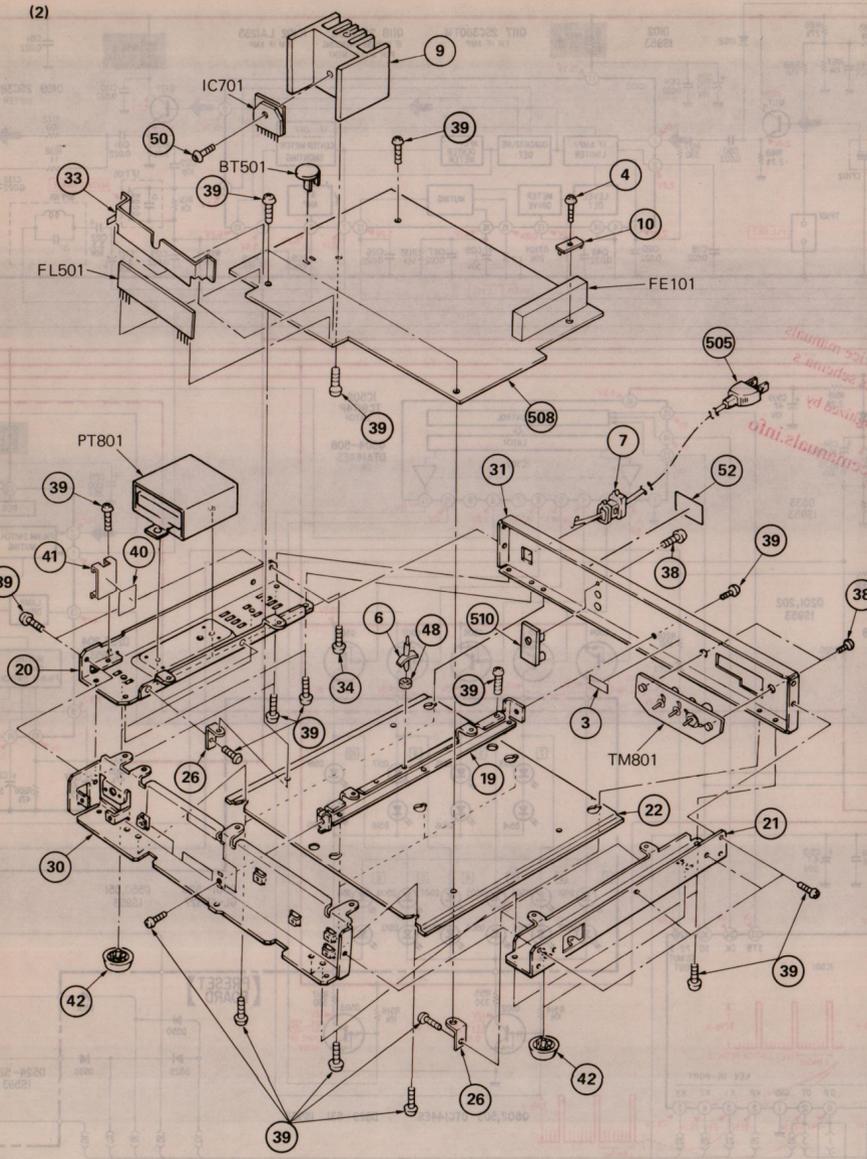

Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

The components identified by shading and mark **A** are critical for safety. Replace only with part number specified.

SECTION 6
ELECTRICAL PARTS LIST

NOTE:
Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
If there are two or more same circuits in a set such as a stereophonic machine, only typical circuit parts may be indicated and capacitors and resistors in other same circuits may be omitted.

CAPACITORS:
MF:µF, PF:µµF.
RESISTORS
All resistors are in ohms.
F : nonflammable

The components identified by shading and mark **A** are critical for safety. Replace only with part number specified.
